Grant Thornton

Oracle Cloud Remediation and Roadmapping Services

Maximising the value of your Oracle Cloud investment

Overview

Grant Thornton helps organisations unlock the full potential of Oracle Cloud Applications through remediation and roadmap planning. Our approach addresses configuration issues, adoption gaps, and continuous improvement needs.

Realising your investment in Oracle Cloud Applications

Many organisations have implemented Oracle's solutions and have not seen the value and functionality available in the product set. This is seldom about the product and more often relates to one of five key themes:

Configuration issues	Adoption gaps	Continuous improvement	Organisational change	Mergers and acquisitions

Our approach

Grant Thornton have developed and proven a methodology for value creation in Oracle. Our approach is pragmatic and outcome driven, with short cycle delivery of analysis and improvement, following the methodology: Assess, Remediate, Enhance, Optimise. We realign Oracle Cloud to business needs, fix configuration issues, and unlock advanced functionality.

Key benefits for your organisation

- Reduced operational risk
- Improved compliance and reporting
- Enhanced user experience
- Increased ROI from Oracle investment

What sets Grant Thornton apart?

- Business value focus
- Deep industry expertise
- Pragmatic, outcome-driven delivery
- Experienced onshore teams
